EU CYBER RESILIENCE ACT · IF YOU SELL INTO THE EU

Which of your machines in the field are affected?

Since September 11, 2026, you have 24 hours to report an actively exploited vulnerability if you sell into the EU. Your affected customers need to hear it from you. The CRA module shows you in minutes who they are.

September 11, 2026
The reporting obligation applies, also to machines in the field.

December 11, 2027
All obligations apply to new machines.

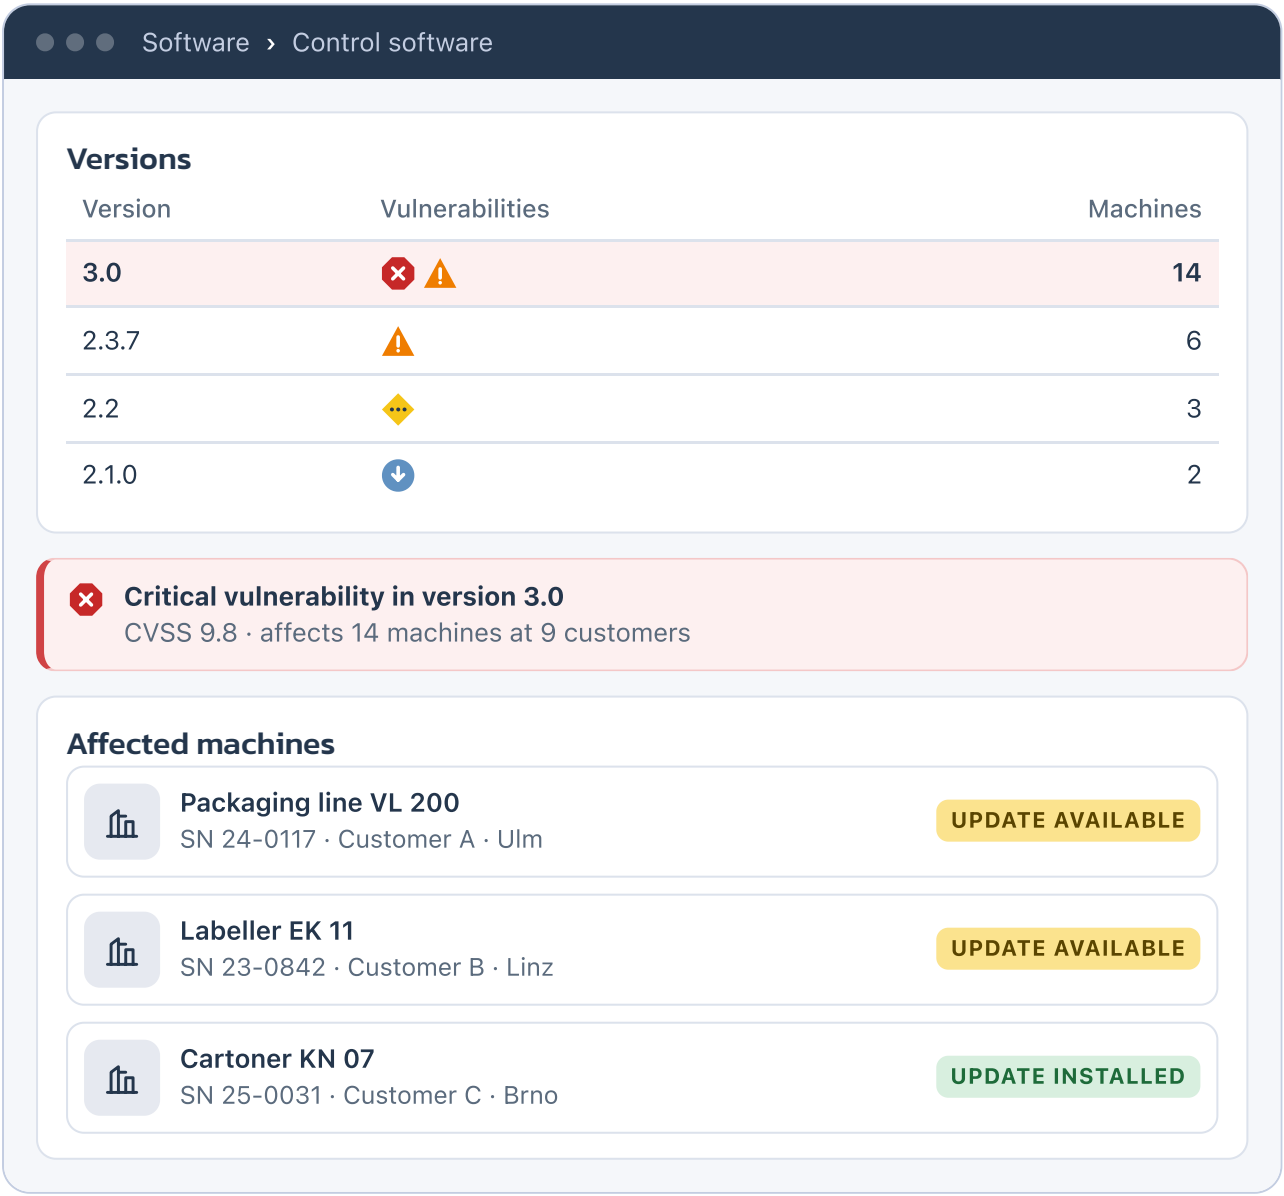

Illustration with sample data, based on the module's views.

WHY THIS AFFECTS YOU

Do you know which customer runs which of your machines?

The clock is already running.

It has been running since September 2026, also for machines that have been at your customers for a long time.

It is your machine.

To the authorities and to your customer, you are the manufacturer, not your controls supplier.

The tools on the market stop too early.

They end at the software version. None of them goes the last mile to the machine at your customer.

THE CASE

From the vulnerability to the customer.

PROBLEM

A new vulnerability affects a built-in controller.

→

SOLUTION

Transaction-Network finds the affected machines from the stored components and software versions.

→

RESULT

You know which customers are affected and which measures are needed.

WHAT ONLY TRANSACTION-NETWORK CAN DO

Others tell you that a component is affected. We tell you where it is.

You see the machine, the customer and the site.

The chain from the vulnerability to the customer runs in one system.

You work per serial number, not per product line.

The system is built for individual machines: you have the bill of materials and software version of every single machine.

Your customers are already on the network.

Software and updates reach them in the account where they manage their machines.

WHAT YOU GET

The machine record is the foundation. The CRA module sits on top.

SITS ON TOP

CRA module

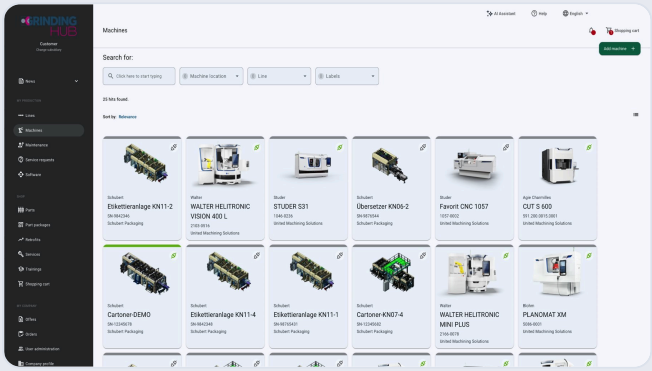

- Software versions per machine
- Affected machines and customers at a glance
- Software and updates for your customers
- Vulnerabilities matched to the installed components
- Measures documented per machine

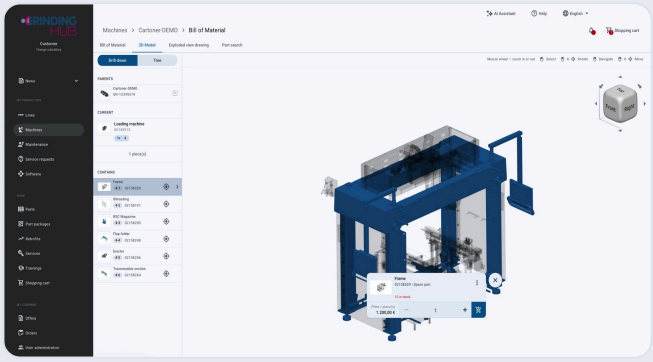

+

EVERY MACHINE ALREADY BRINGS

Asset Management

- Machine record per serial number, across all customers
- Customer and site per machine
- Bill of materials and components, with 3D model
- Documents and changes

Views from the demo account.

HOW TO START

See the CRA module live in 30 minutes.

We use no slides. You see the system live, and together we look at which gaps can be closed for your machines.

You do not need to prepare anything.
You make no commitment.

WHAT A CRA CASE NEEDS

1. Machine and serial number
2. Bill of materials
3. Components
4. Software versions
5. Customer
6. Site
7. Changes
8. Vulnerabilities and measures

QUESTIONS

What machine builders ask.

Does the CRA apply if we build our machines outside the EU?

Yes, if you sell into the EU. The CRA is an EU regulation (2024/2847). It applies in every member state to every machine with digital elements placed on the EU market, wherever it was built.

Does this also apply to machines already at our customers?

Yes, the reporting obligation has applied to them since September 11, 2026. The other obligations apply to them only if they are substantially modified after December 11, 2027.

Does the CRA module make our machine secure?

No, and we say so openly. Interfaces, passwords and the control cabinet stay with you and your controls suppliers. The CRA module makes sure that you know which machine is affected and can act.

Do we need a second system for this?

No. Your machines go in once, and those already in the field come in from your own lists. Your ERP stays.

YOUR NEXT STEP

In 30 minutes you will see how you answer the question.

You see it live in the system, without slides and without any commitment.
